

DG/UX™ Users Please Note

When dumping data to the multicapacity tape drive with the CPIO utility running on DG/UX™, you must use the B (Blocking) switch. If you do not, you will not be able to read the dumped data with CPIO under AOS/VS or AOS/VS II.

All AViiON™ systems can boot only from media formatted with a fixed length record size of 512 bytes. Therefore, AViiON systems will not boot from QIC-320 or QIC-525 media written to in either 1024 bytes (1 Kbyte) block size or in variable block size mode.
