Exabyte 8500 C Integrated with SCZ-6

Zetaco has successfully completed integration testing of the Exabyte 8500 C with the SCZ-6 controller. It needs to be noted that we had to work with Exabyte, to have them make firmware changes, to enable concluding our testing.

The final code revisions, of the Exabyte unit, were as follows:

SYS	784600 - All	80413
KRW	780100 - E14	75107
KCD	780200 - C07	73555
SIF	780400 - C07	65959
BTPROM	013260 - 001	85B - CF14
FECODE	014222 - 018	8CC - 04P0
EECODE	014915 - 000	8CE - 0179
DECK	728050 - 004	85162405

Standard QIC Tape

We have ceased working on integrating a standard QIC drive with the SCZ-6 controller. The expected effort is large and I don't believe there is a large demand. Remember the SCZ-6 has successfully been integrated with the Data General QIC drive.

If you have any questions or need more information, contact John Schmidt or Gary Becker.
